```
ChameleonIDE
x :: Int
                                  The expression x can be
x = id 'c'
                                  either one of the two types:
                                   x :: Int
                                   x :: Char
```
